

FOR PATIENTS WITH DIABETES

Getting ready for your PET-CT scan.

- Your blood sugar level must be below 11.1 mmol/L at the time of your appointment (optimally below 8.3 mmol/L).
- ☒ Please consult with your physician to determine the safest way possible to manage your blood sugar level before your scan.
- ☒ At least 3 days prior to your scheduled appointment, you should check your blood sugar level in the morning before eating to be sure it is below 11.1 mmol/L in a fasting state.

For patients taking oral medication for diabetes (OH) (oral hypoglycemic) – Consult your physician if you should take your pills as normal. If you normally have very low blood sugar after fasting, ask your physician if you should skip your pill on the morning of the PET scan. Please do a fasting blood sugar check.

For patients taking insulin – please call us for further instructions.
